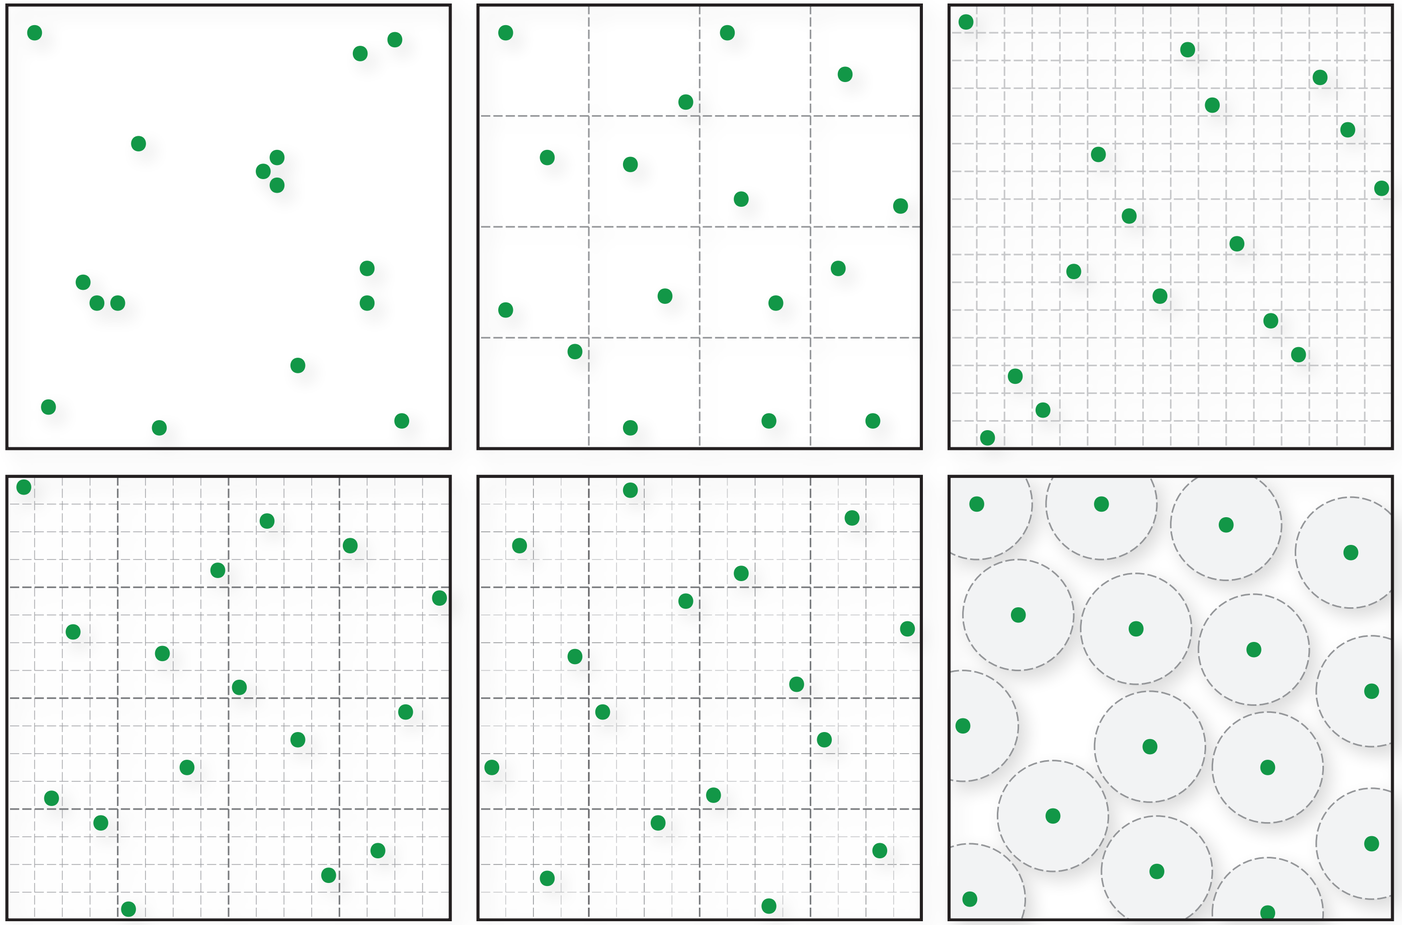
Popular Sampling Patterns

Fourier Analysis of Numerical Integration in Monte Carlo Rendering



Wojciech Jarosz
wjarosz@dartmouth.edu

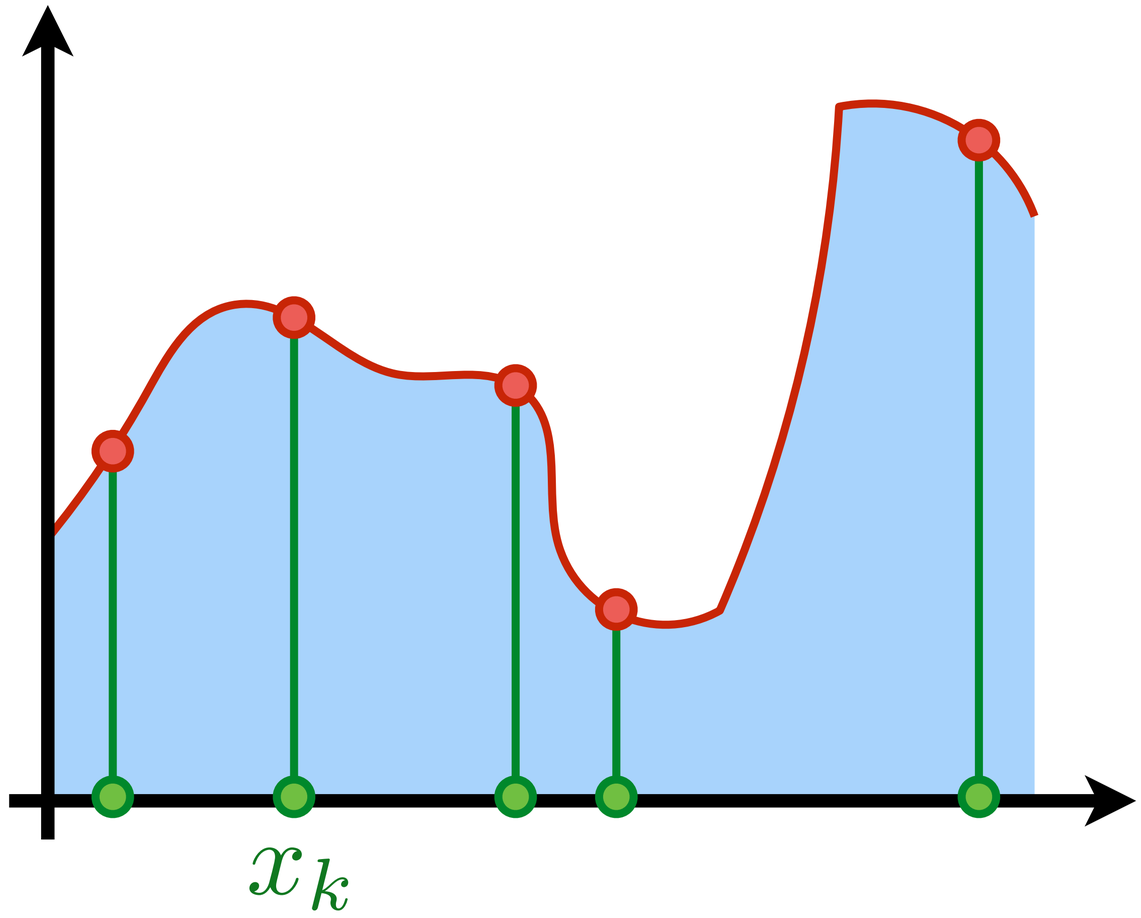
Dartmouth

Recall: Monte Carlo Integration

$$I \approx \int_D f(x)\mathbf{S}(x)\,\mathrm{d}x$$

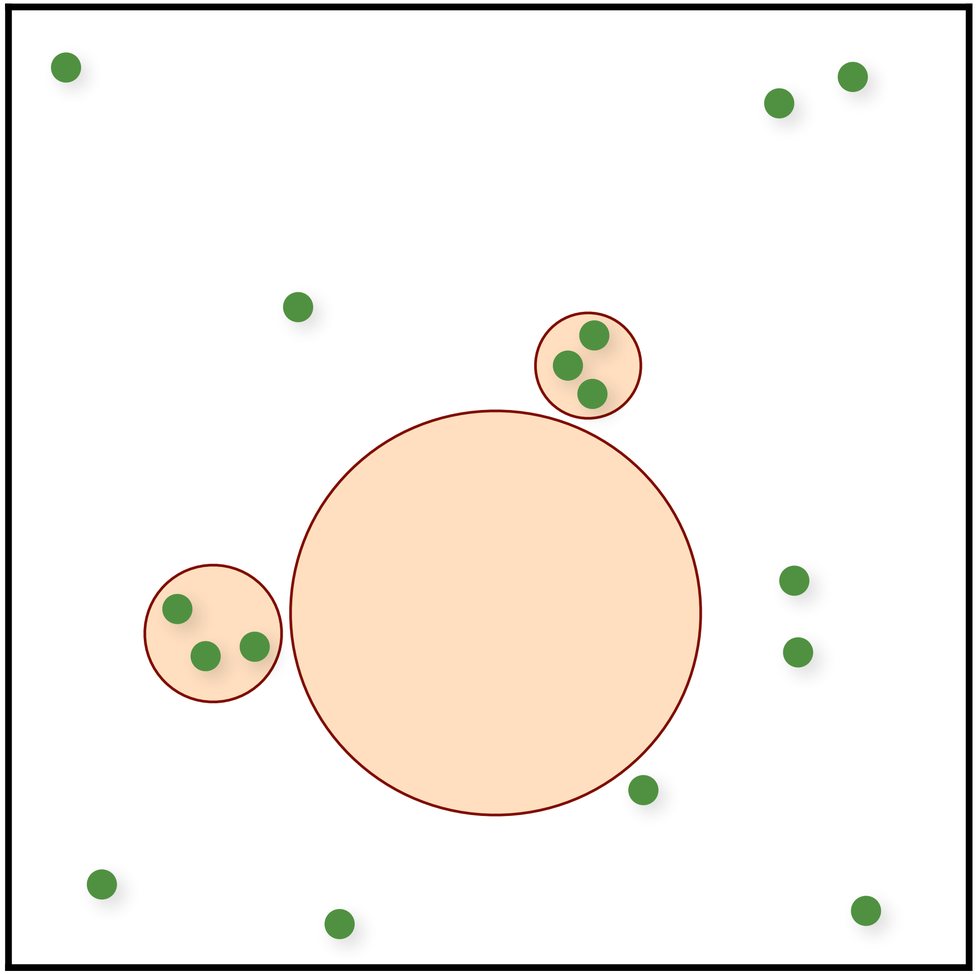
$$\mathbf{S}(x) = \frac{1}{N}\sum_{k=1}^{N}\delta(x - x_k)$$

How to generate the locations x_k?



Independent Random Sampling

```
for (uint i = 0; i < num; i++)
{
    samples(i).x = randf();
    samples(i).y = randf();
}
```



✔ Trivially extends to higher dimensions

✔ Trivially progressive and memory-less

✘ Big gaps

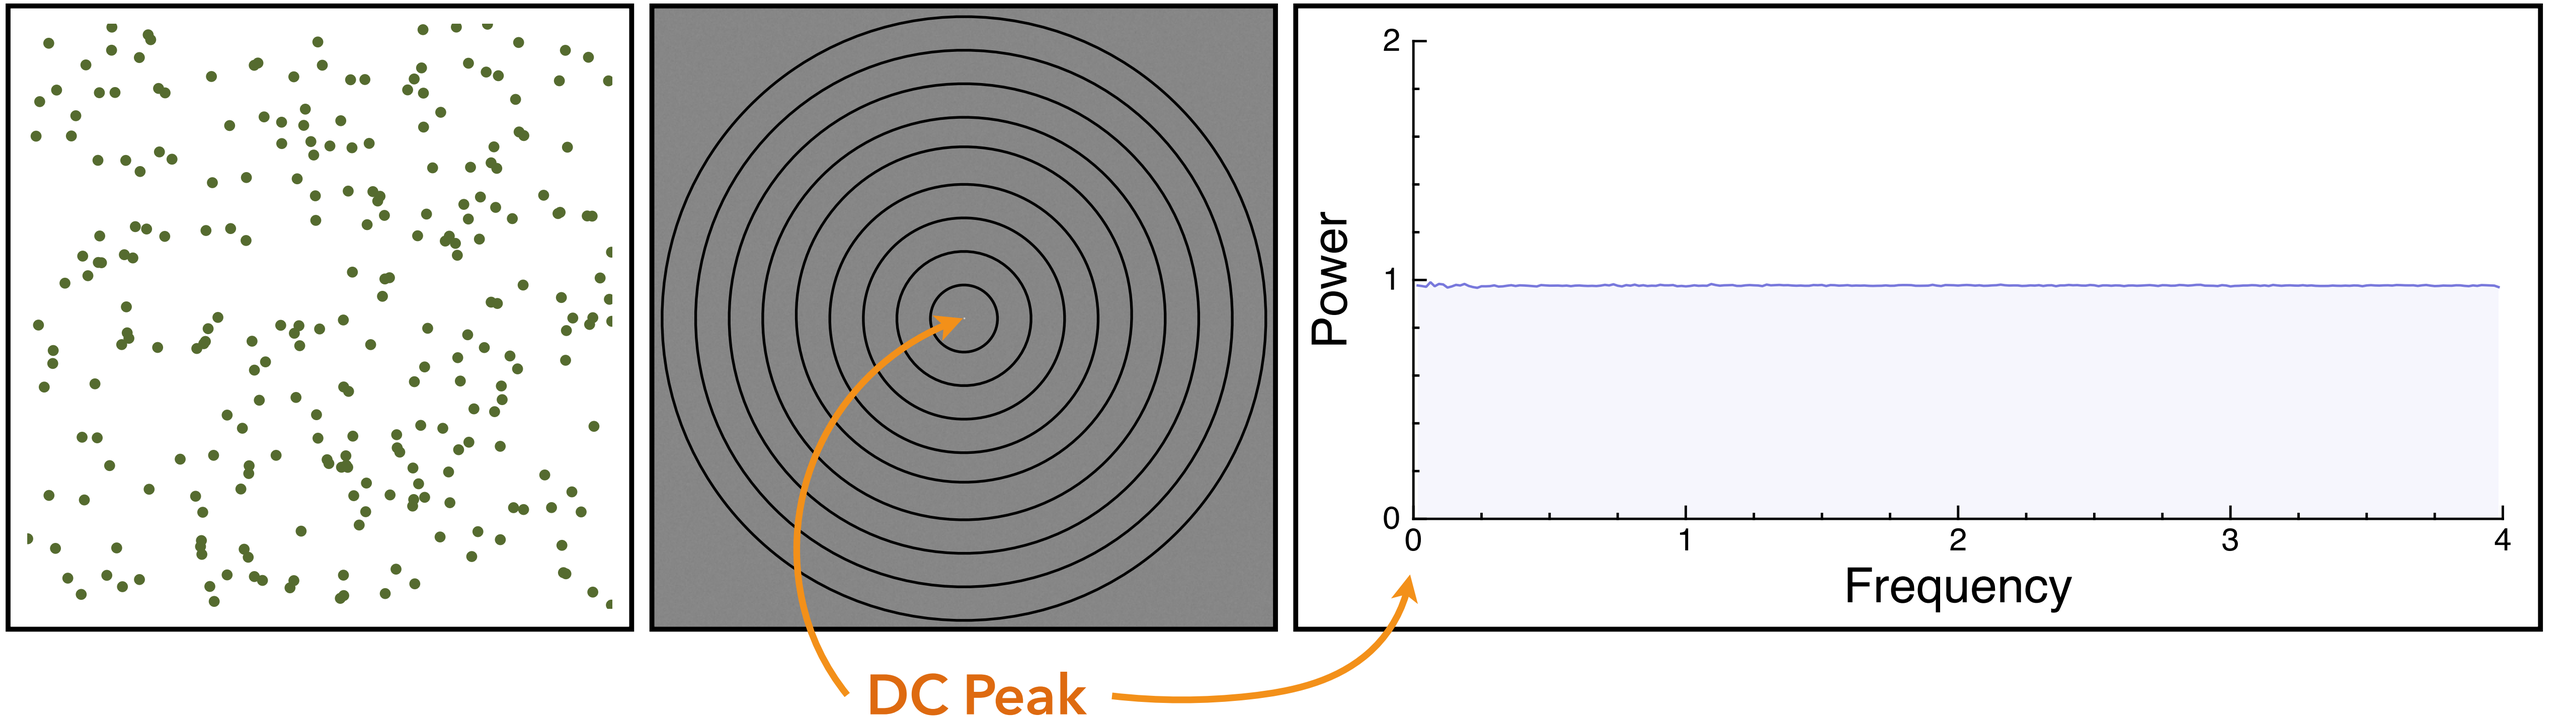
✘ Clumping

Independent Random Sampling

Samples

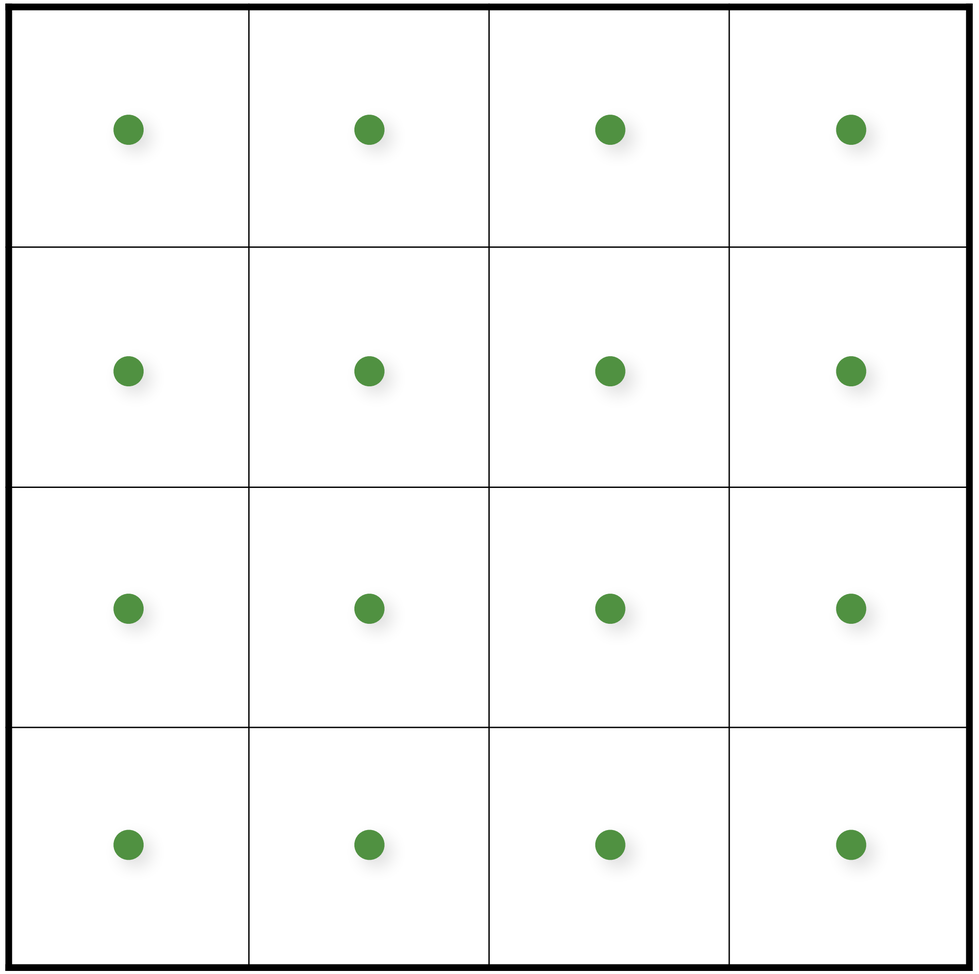
Power spectrum

Radial mean



Regular Sampling

```
for (uint i = 0; i < numX; i++)
    for (uint j = 0; j < numY; j++)
    {
        samples(i,j).x = (i + 0.5)/numX;
        samples(i,j).y = (j + 0.5)/numY;
    }
```



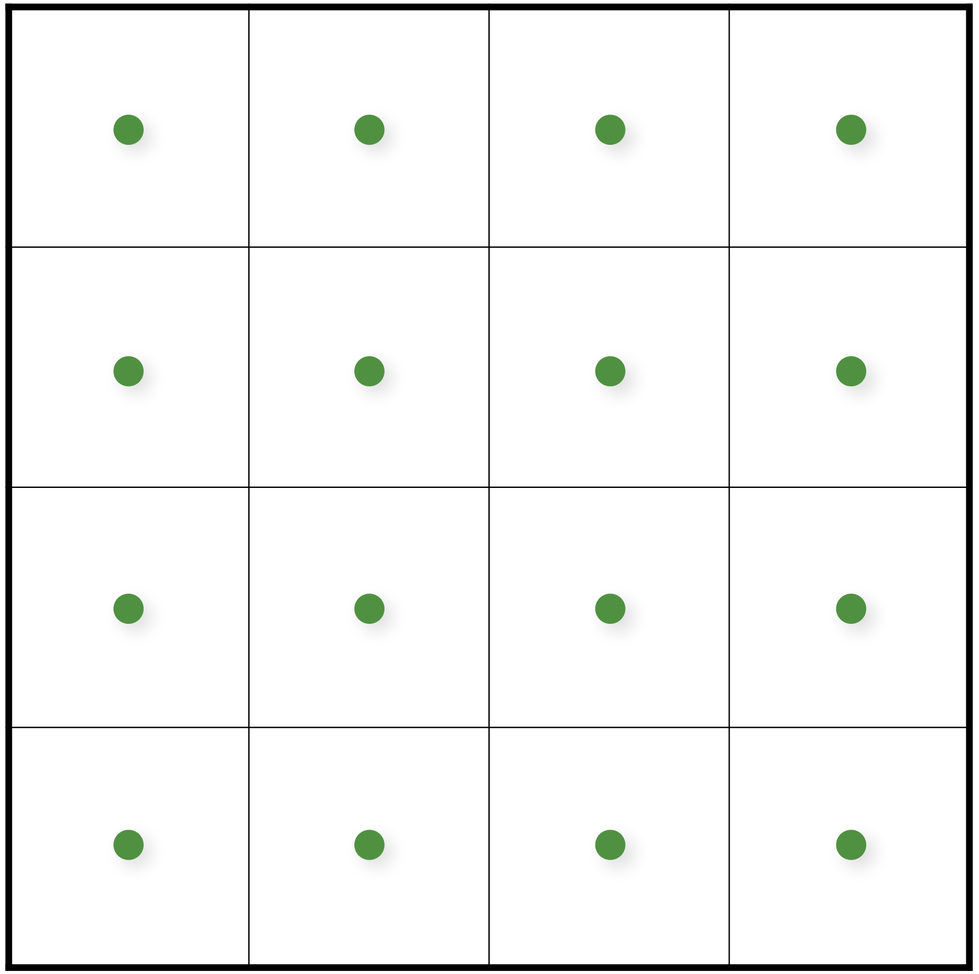
✔ Extends to higher dimensions, but…

✘ Curse of dimensionality

✘ Aliasing

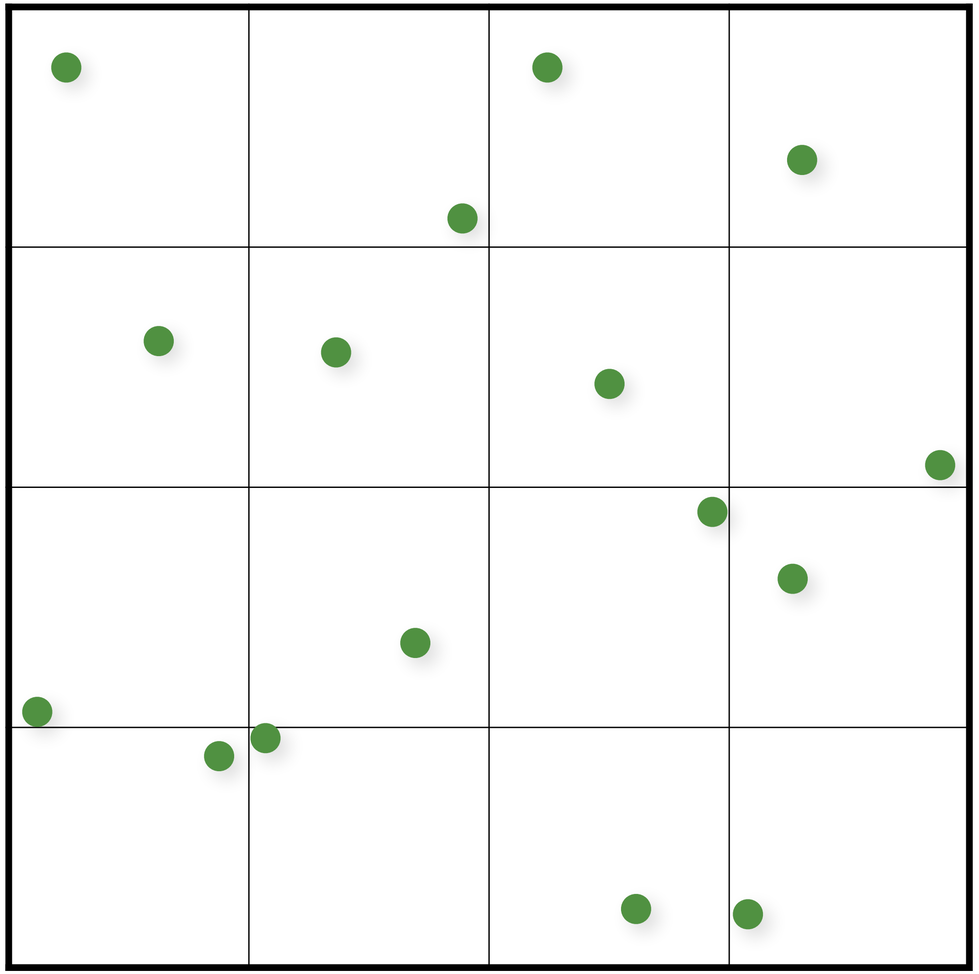
Regular Sampling

```
for (uint i = 0; i < numX; i++)
    for (uint j = 0; j < numY; j++)
    {
        samples(i,j).x = (i + 0.5)/numX;
        samples(i,j).y = (j + 0.5)/numY;
    }
```



Jittered/Stratified Sampling

```
for (uint i = 0; i < numX; i++)
    for (uint j = 0; j < numY; j++)
    {
        samples(i,j).x = (i + randf())/numX;
        samples(i,j).y = (j + randf())/numY;
    }
```



✔ Provably cannot increase variance

✔ Extends to higher dimensions, but…

✘ Curse of dimensionality

✘ Not progressive

Jittered Sampling

Samples

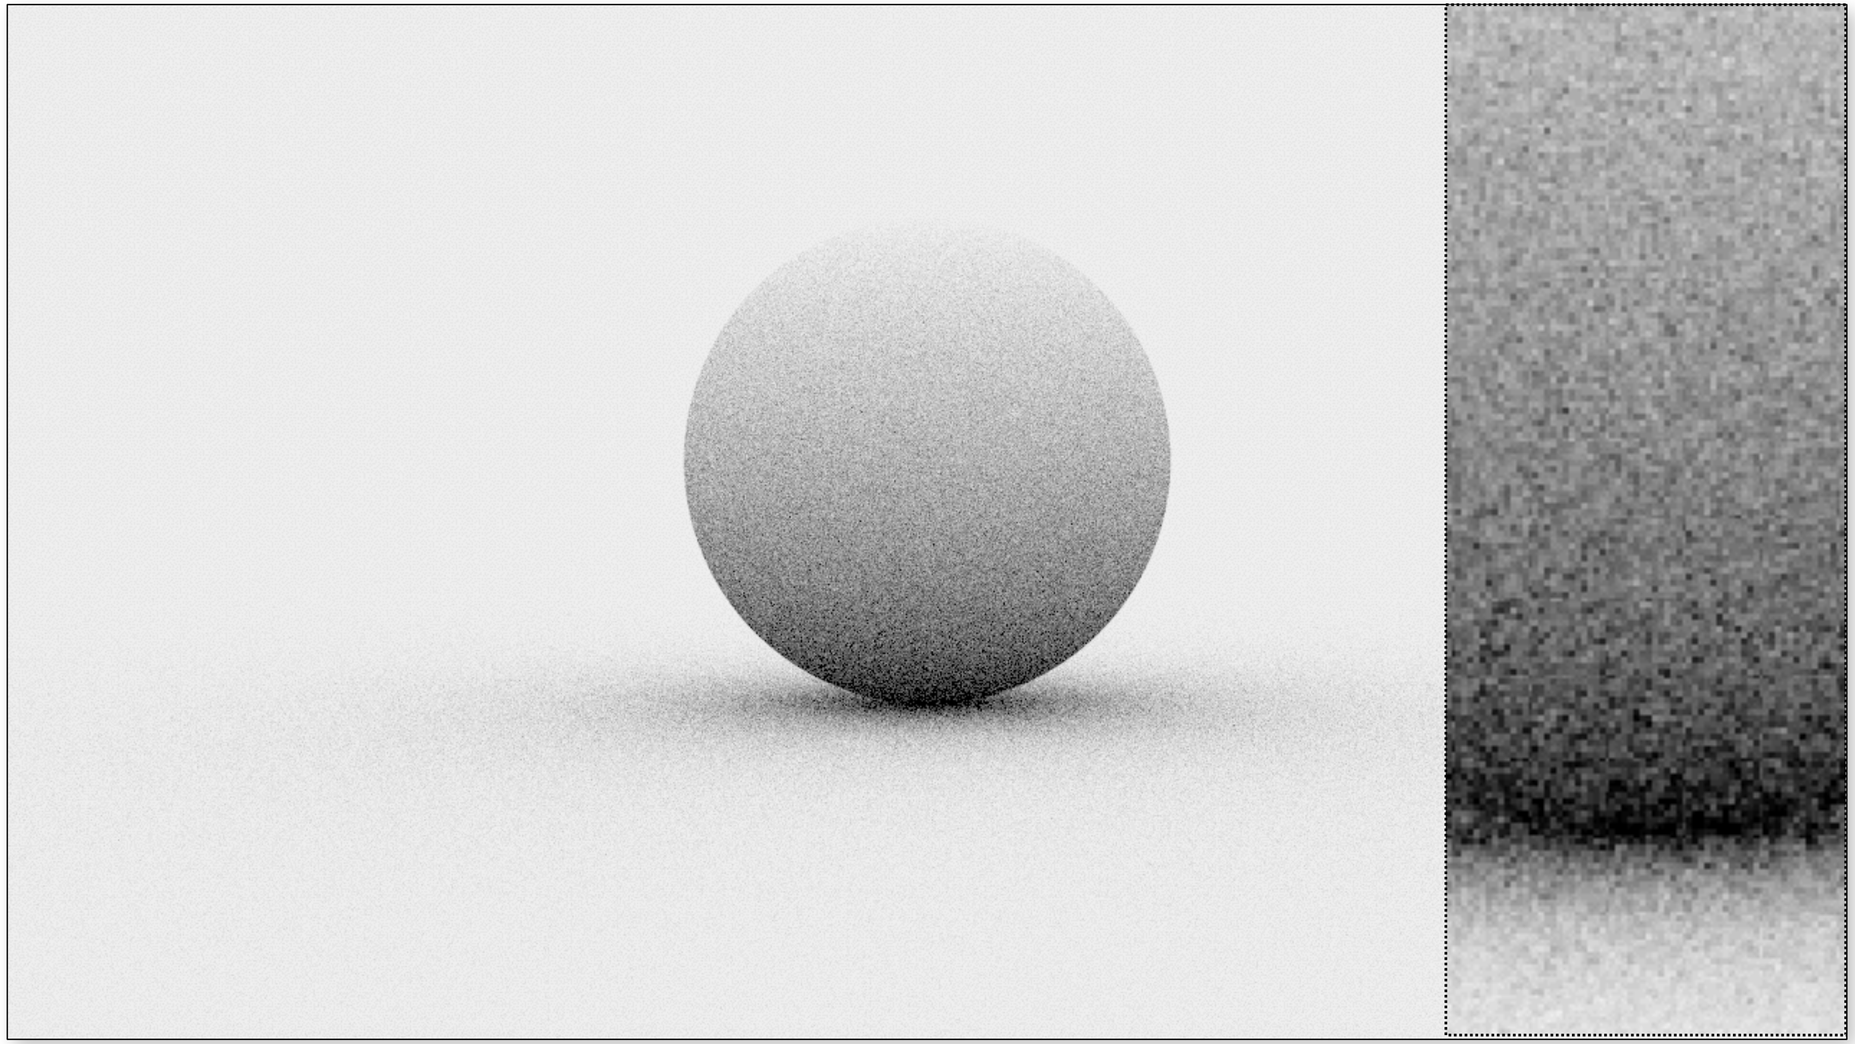
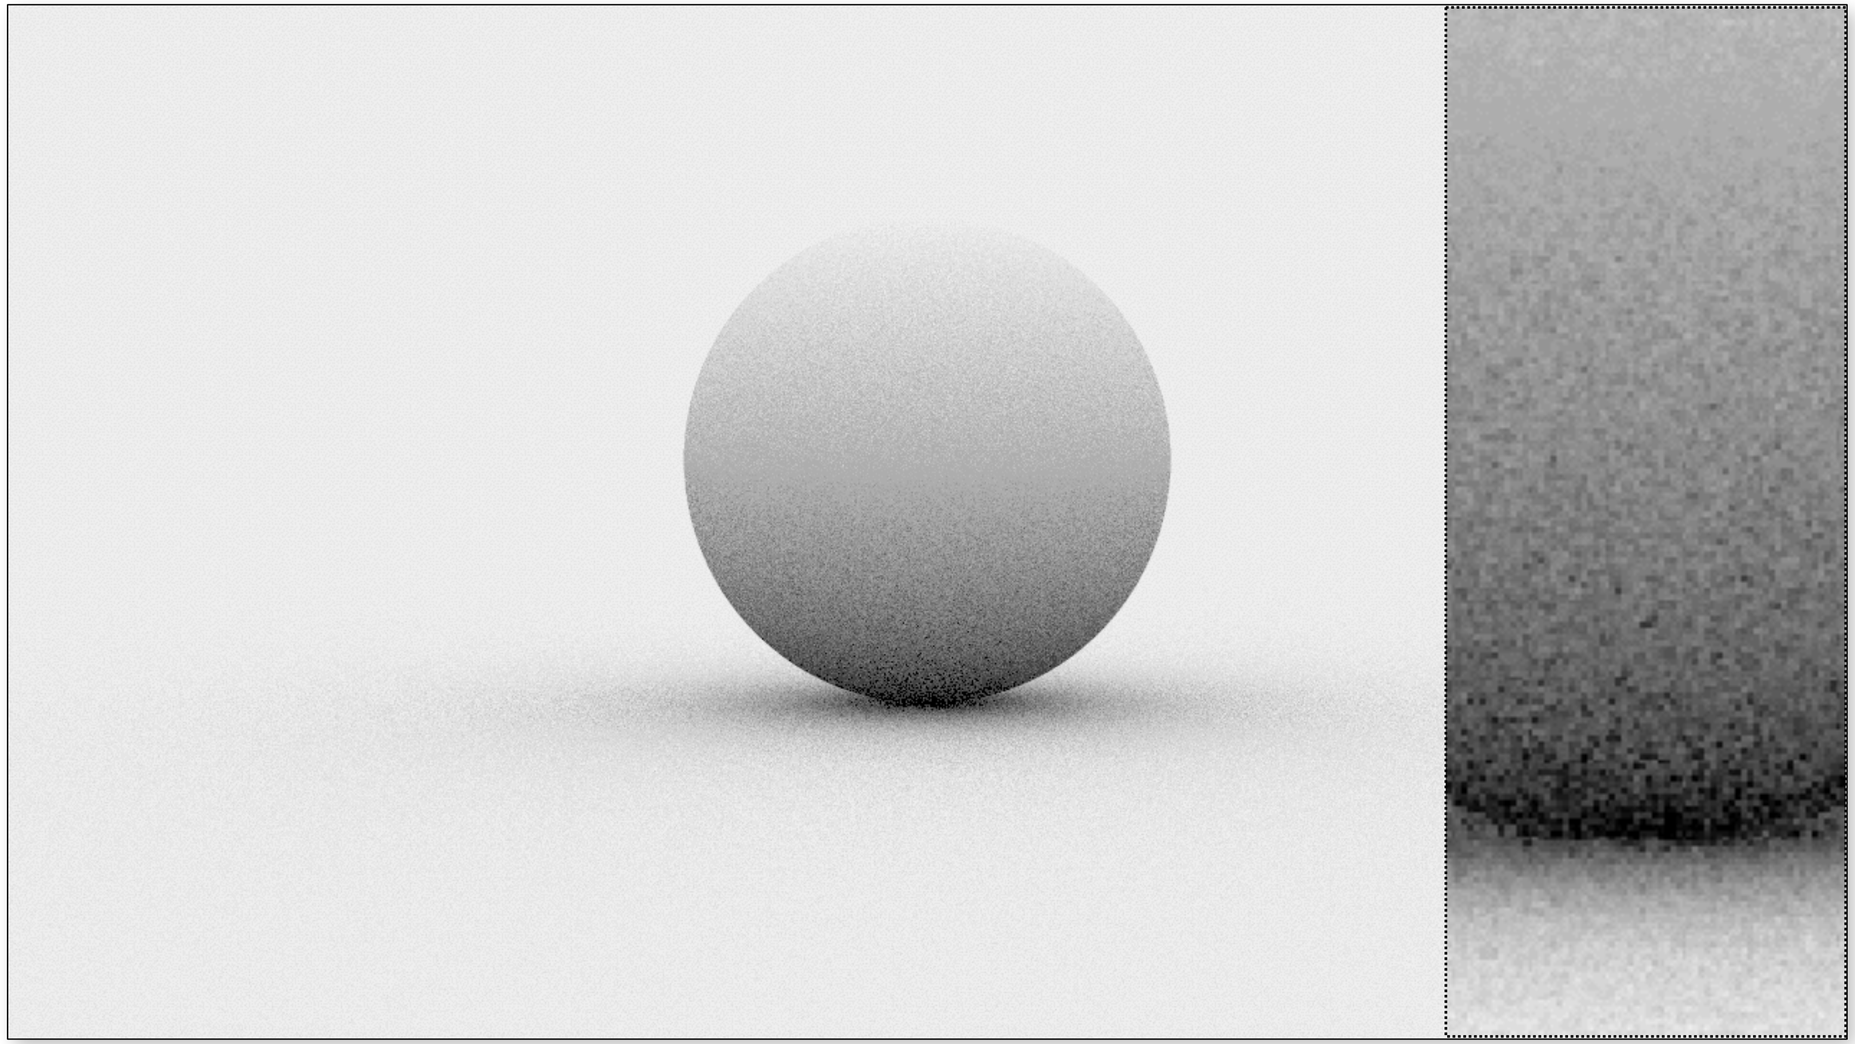
Monte Carlo (16 random samples)



Monte Carlo (16 jittered samples)



Stratifying in Higher Dimensions

Stratification requires O(N^d) samples

- e.g. pixel (2D) + lens (2D) + time (1D) = 5D
  - splitting 2 times in 5D = 2^5 = 32 samples
  - splitting 3 times in 5D = 3^5 = 243 samples!

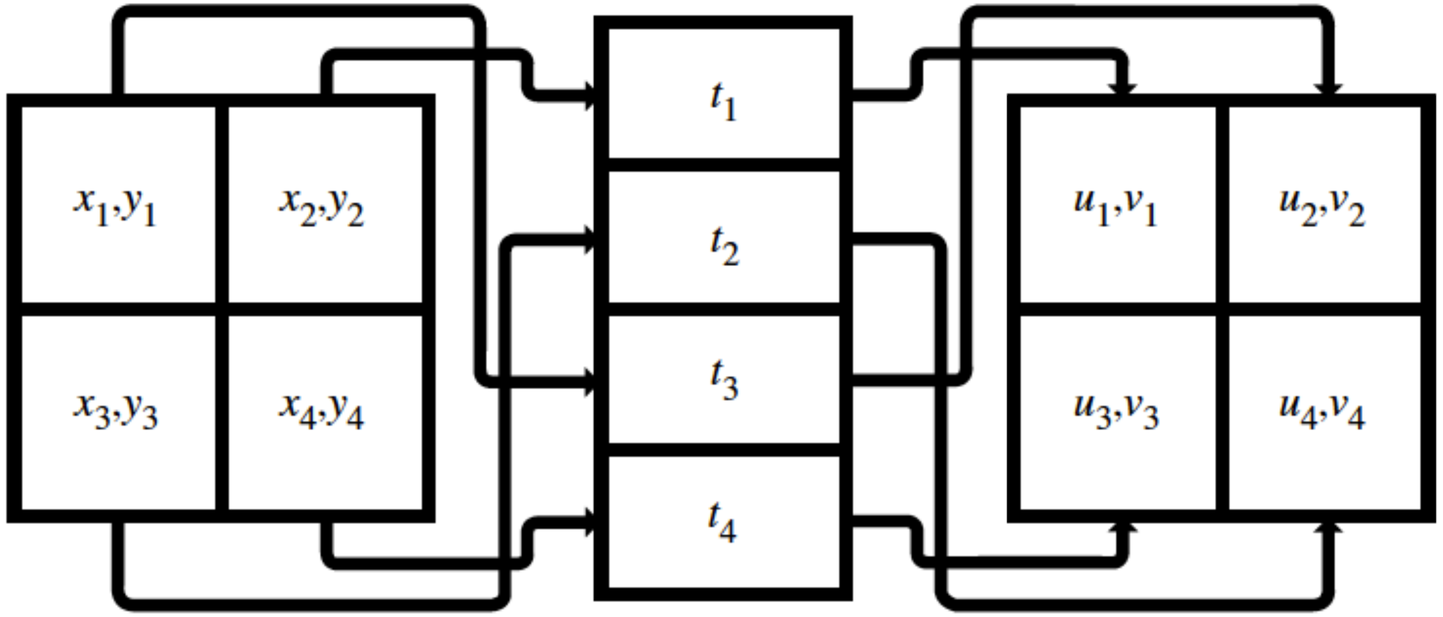
Inconvenient for large d

- cannot select sample count with fine granularity

Uncorrelated Jitter [Cook et al. 84]

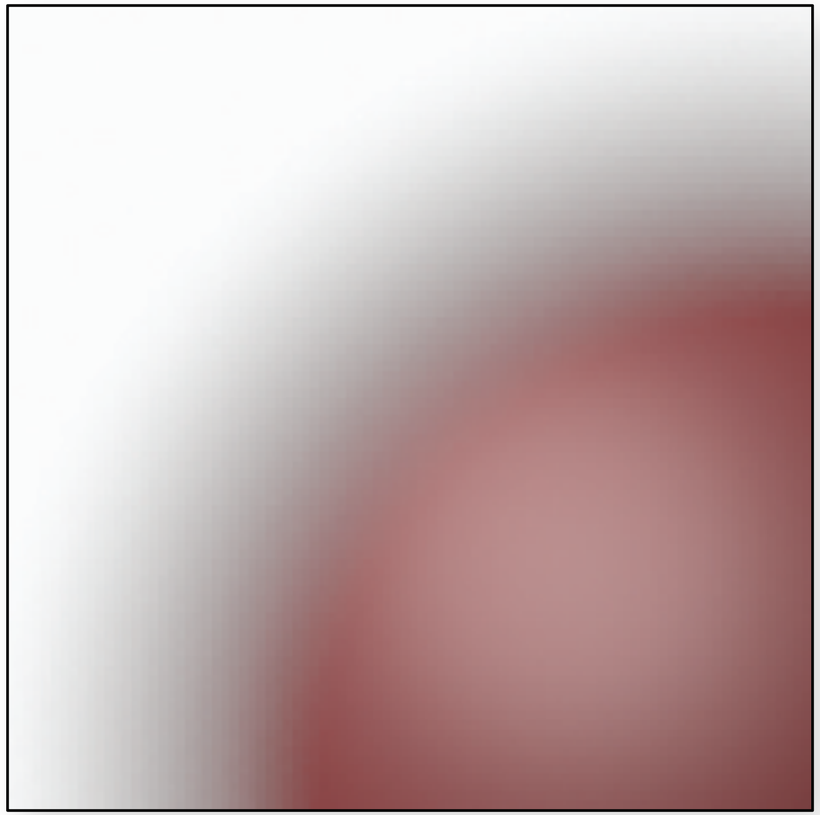
Compute stratified samples in sub-dimensions

- 2D jittered (x,y) for pixel
- 2D jittered (u,v) for lens
- 1D jittered (t) for time
- combine dimensions in random order

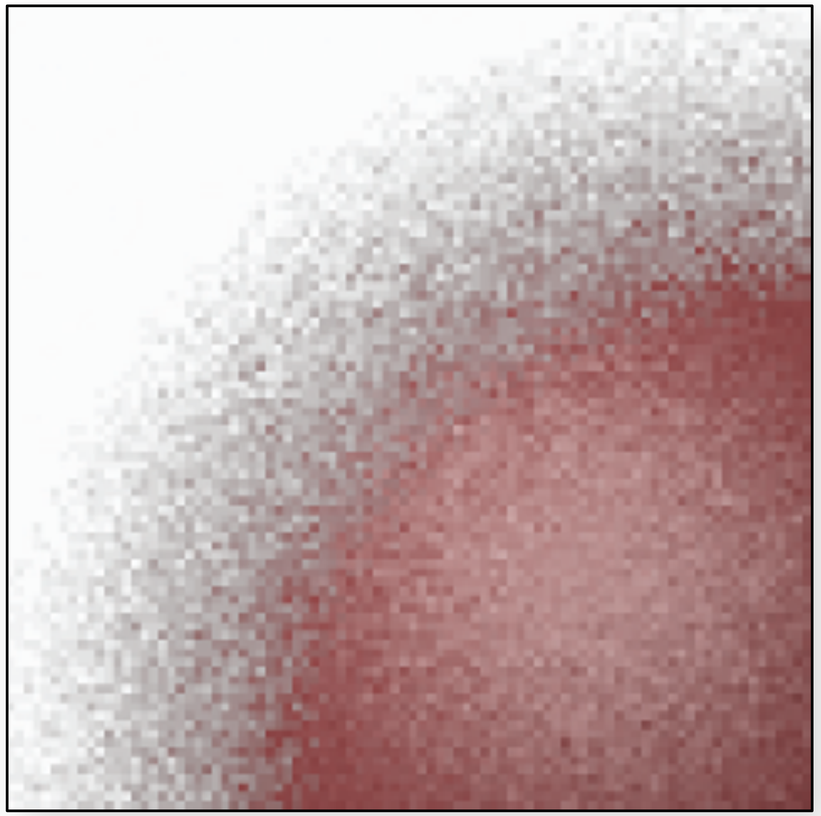


Depth of Field (4D)

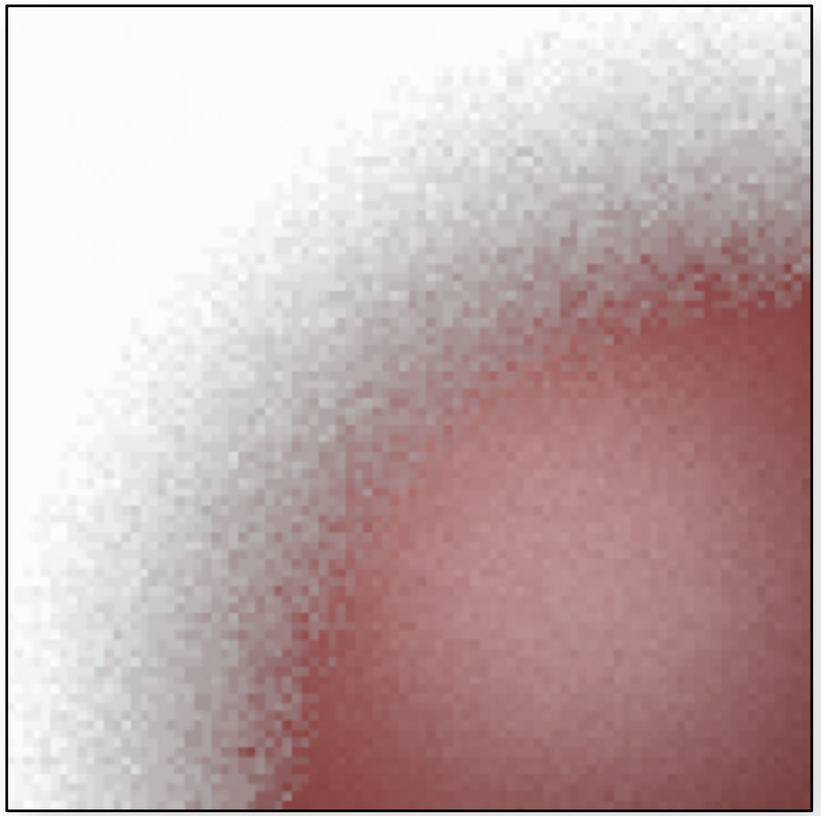
Reference



Random Sampling



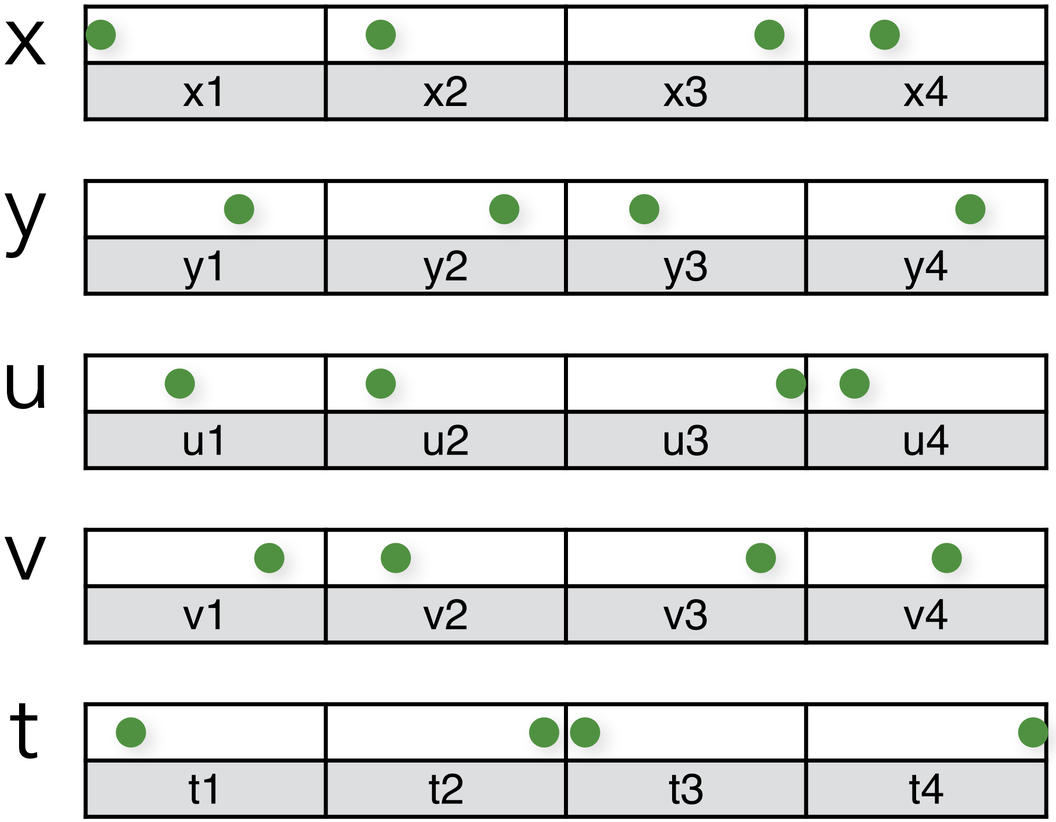
Uncorrelated Jitter



Uncorrelated Jitter → Latin Hypercube

Stratify samples in each dimension separately

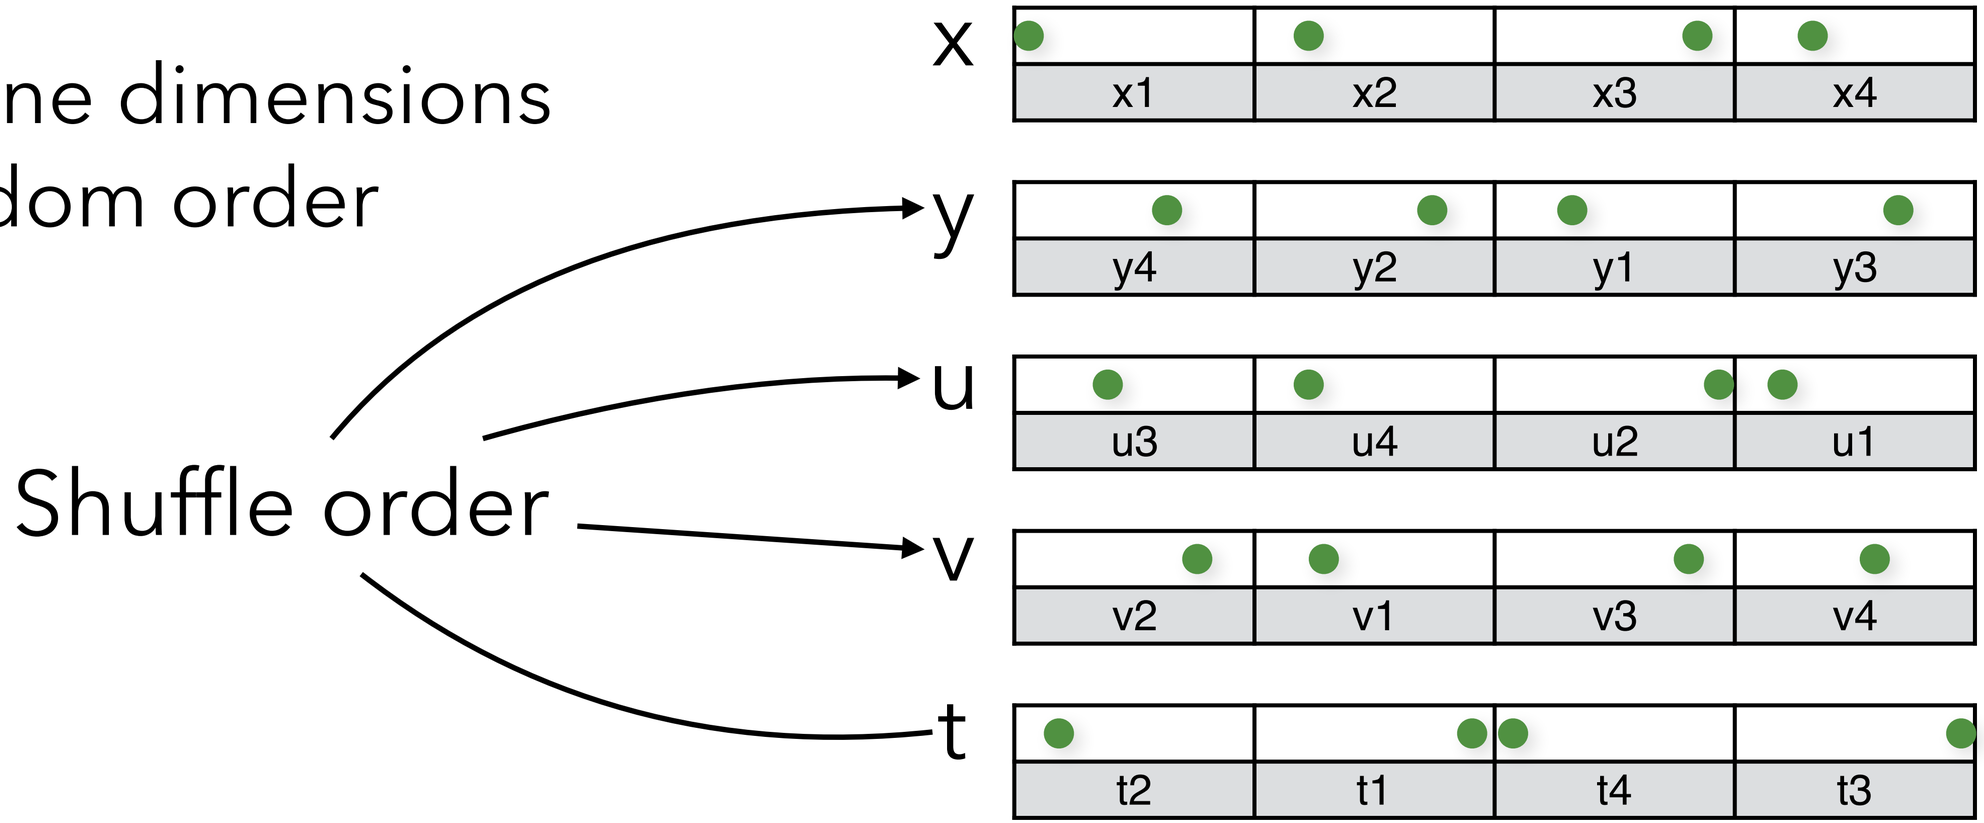
- for 5D: 5 separate 1D jittered point sets
- combine dimensions in random order



Uncorrelated Jitter → Latin Hypercube

Stratify samples in each dimension separately

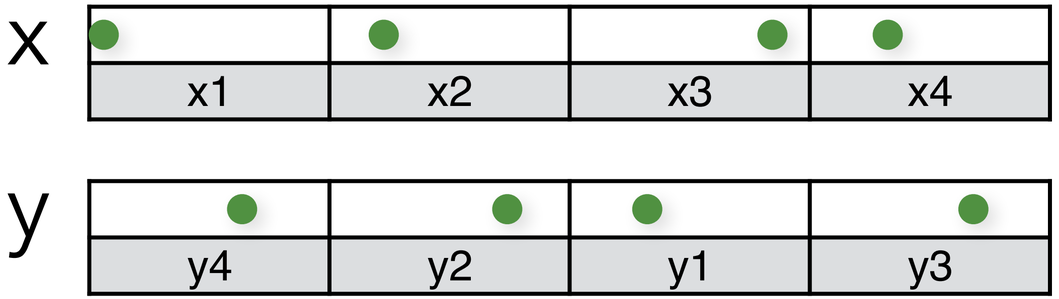
- for 5D: 5 separate 1D jittered point sets
- combine dimensions in random order



N-Rooks = 2D Latin Hypercube [Shirley 91]

Stratify samples in each dimension separately

- for **2D**: **2** separate 1D jittered point sets
- combine dimensions in random order



Latin Hypercube (N-Rooks) Sampling

[Shirley 91]

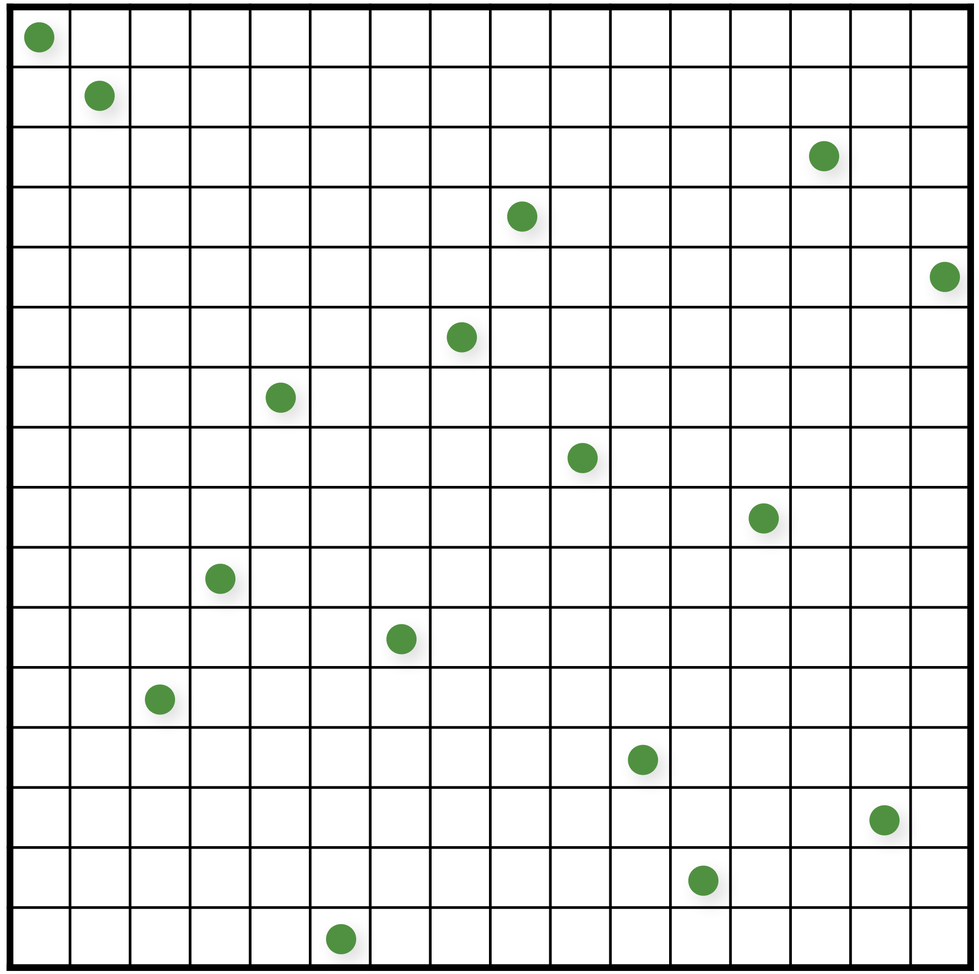


Image source: Michael Maggs, CC BY-SA 2.5

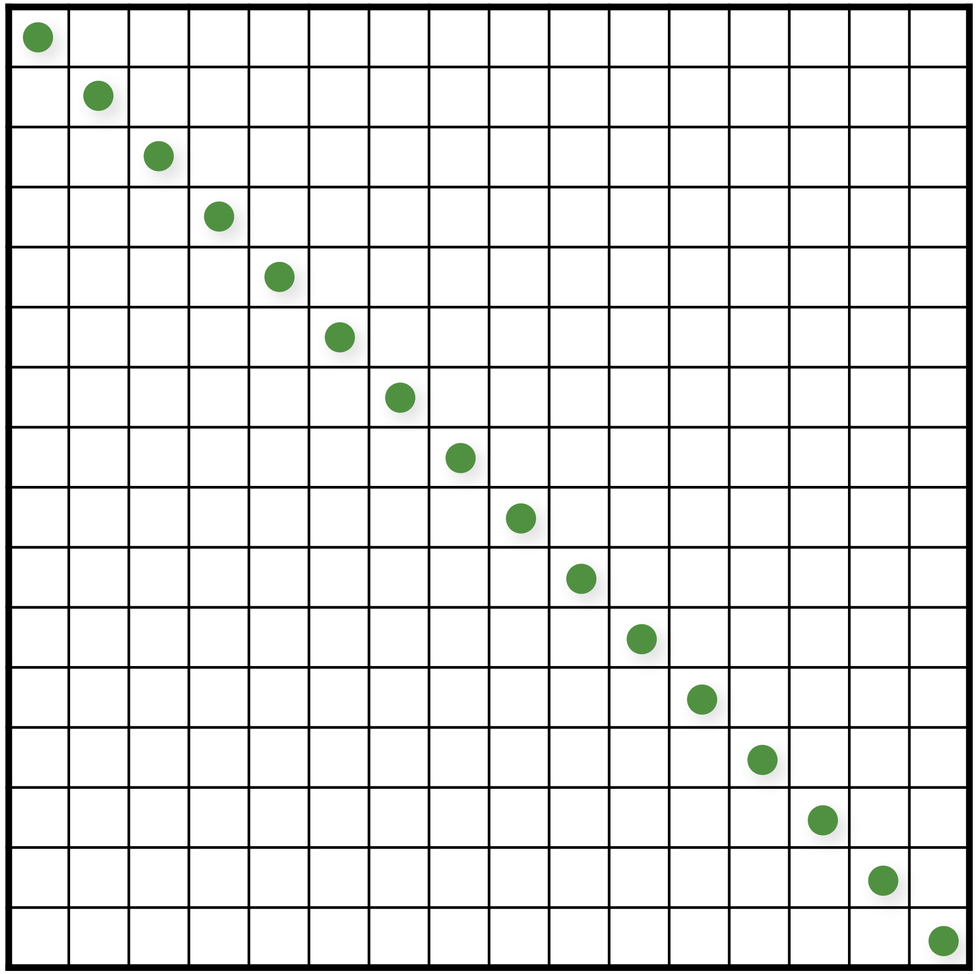
Latin Hypercube (N-Rooks) Sampling

```
// initialize the diagonal
for (uint d = 0; d < numDimensions; d++)
    for (uint i = 0; i < numS; i++)
        samples(d,i) = (i + randf())/numS;
```

```
// shuffle each dimension independently
for (uint d = 0; d < numDimensions; d++)
    shuffle(samples(d,:));
```

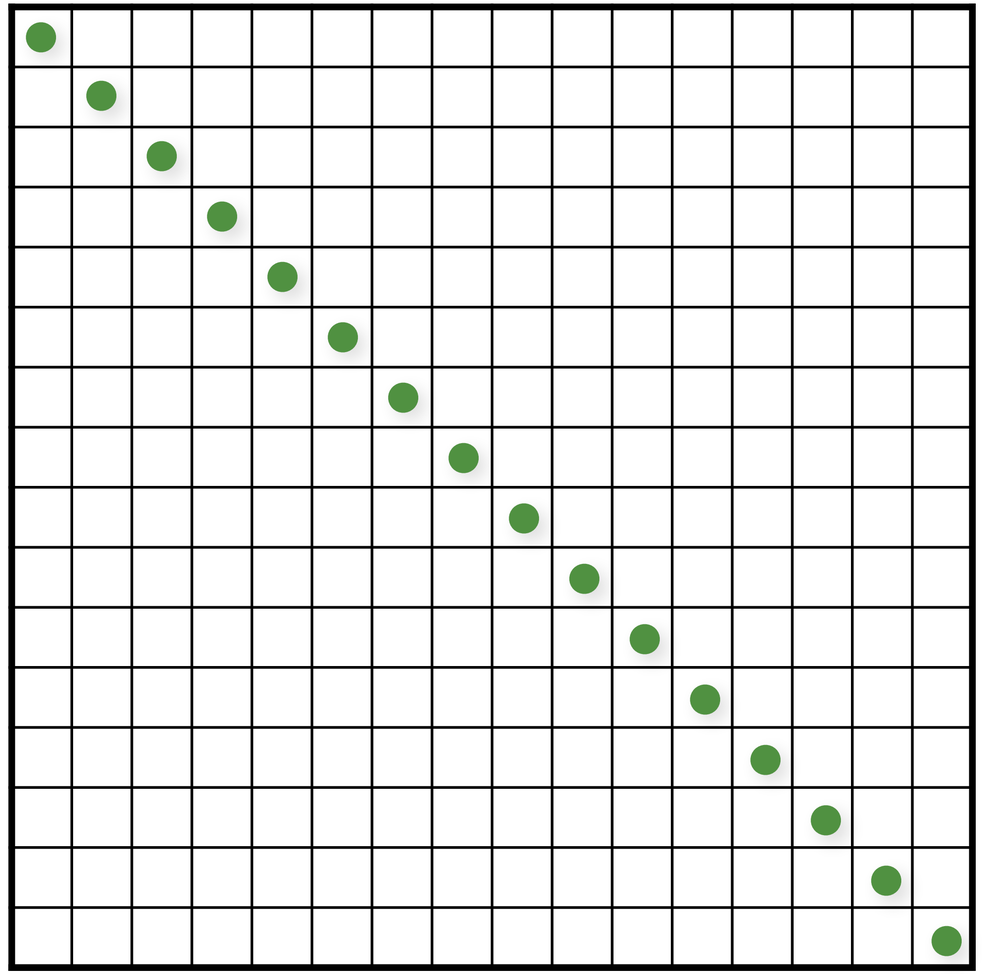


Initialize

Latin Hypercube (N-Rooks) Sampling

```
// initialize the diagonal
for (uint d = 0; d < numDimensions; d++)
    for (uint i = 0; i < numS; i++)
        samples(d,i) = (i + randf())/numS;

// shuffle each dimension independently
for (uint d = 0; d < numDimensions; d++)
    shuffle(samples(d,:));
```

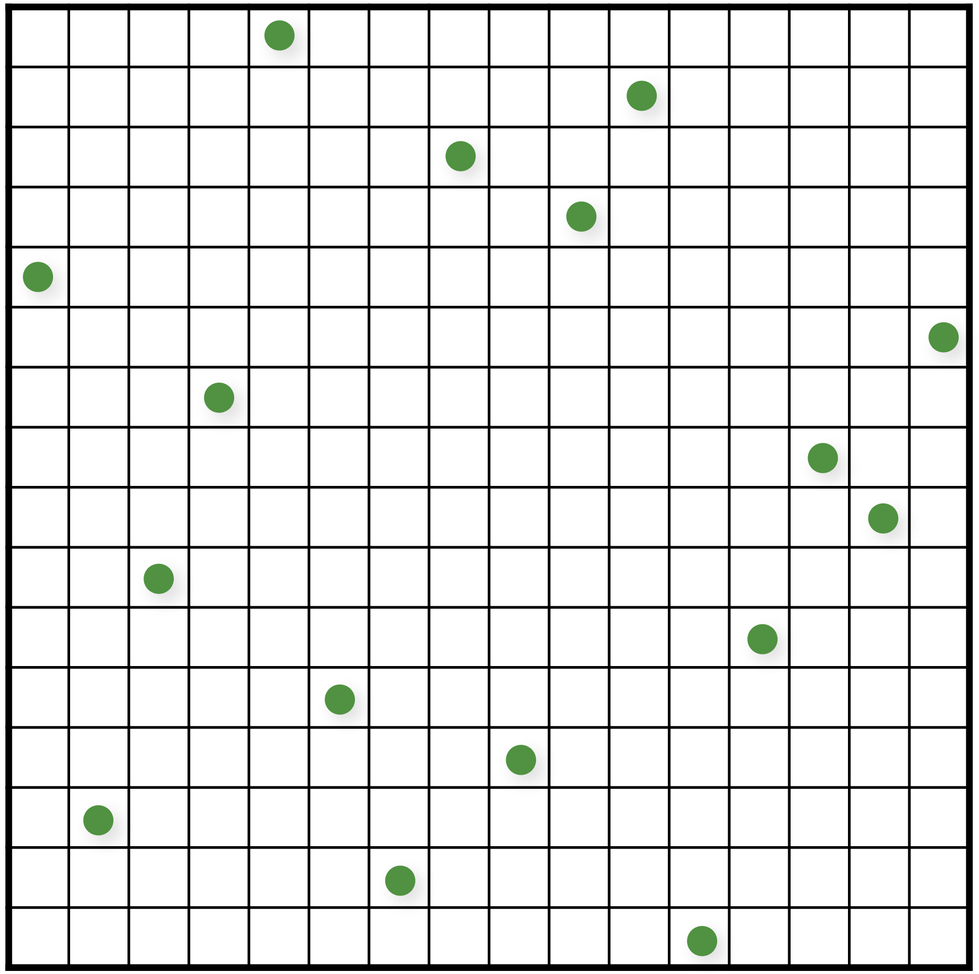


Shuffle rows

Latin Hypercube (N-Rooks) Sampling

```
// initialize the diagonal
for (uint d = 0; d < numDimensions; d++)
    for (uint i = 0; i < numS; i++)
        samples(d,i) = (i + randf())/numS;

// shuffle each dimension independently
for (uint d = 0; d < numDimensions; d++)
    shuffle(samples(d,:));
```

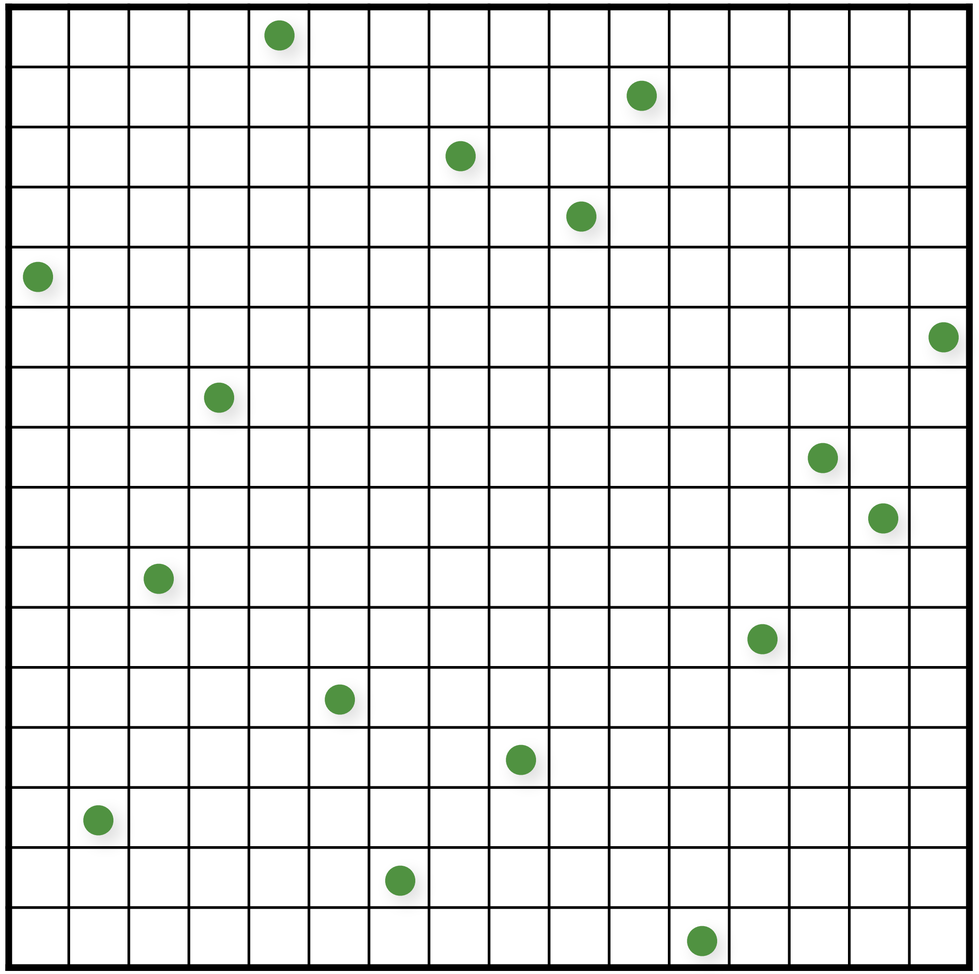


Shuffle rows

Latin Hypercube (N-Rooks) Sampling

```
// initialize the diagonal
for (uint d = 0; d < numDimensions; d++)
    for (uint i = 0; i < numS; i++)
        samples(d,i) = (i + randf())/numS;

// shuffle each dimension independently
for (uint d = 0; d < numDimensions; d++)
    shuffle(samples(d,:));
```



Shuffle columns

Latin Hypercube (N-Rooks) Sampling

```
// initialize the diagonal
for (uint d = 0; d < numDimensions; d++)
    for (uint i = 0; i < numS; i++)
        samples(d,i) = (i + randf())/numS;

// shuffle each dimension independently
for (uint d = 0; d < numDimensions; d++)
    shuffle(samples(d,:));
```

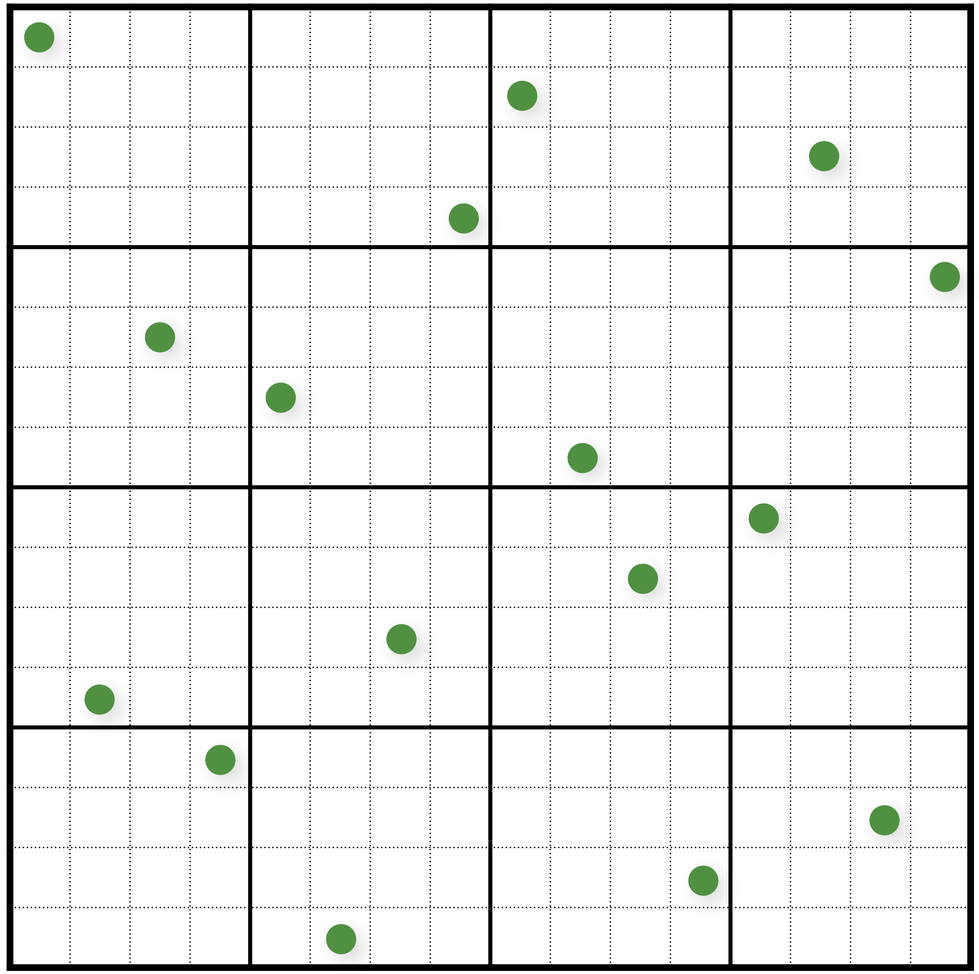
Multi-Jittered Sampling

Kenneth Chiu, Peter Shirley, and Changyaw Wang. "Multi-jittered sampling." In *Graphics Gems IV*, pp. 370–374. Academic Press, May 1994.

- combine N-Rooks and Jittered stratification constraints

Multi-Jittered Sampling



Multi-Jittered Sampling

```
// initialize
float cellSize = 1.0 / (resX*resY);
for (uint i = 0; i < resX; i++)
     for (uint j = 0; j < resY; j++)
     {
          samples(i,j).x = i/resX + (j+randf()) / (resX*resY);
          samples(i,j).y = j/resY + (i+randf()) / (resX*resY);
     }

// shuffle x coordinates within each column of cells
for (uint i = 0; i < resX; i++)
     for (uint j = resY-1; j >= 1; j--)
          swap(samples(i, j).x, samples(i, randi(0, j)).x);

// shuffle y coordinates within each row of cells
for (unsigned j = 0; j < resY; j++)
     for (unsigned i = resX-1; i >= 1; i--)
          swap(samples(i, j).y, samples(randi(0, i), j).y);
```

Low-Discrepancy Sampling

Deterministic sets of points specially crafted to be evenly distributed (have low discrepancy).

Entire field of study called Quasi-Monte Carlo (QMC)

The Van der Corput Sequence

Radical Inverse Φ_b in base 2

Subsequent points “fall into biggest holes”

n	Base 2	Φ_b
1	1	.1 = 1/2
2	10	.01 = 1/4
3	11	.11 = 3/4
4	100	.001 = 1/8
5	101	.101 = 5/8
6	110	.011 = 3/8
7	111	.111 = 7/8
…		

Halton and Hammersley Points

Halton: Radical inverse with different base for each dimension:

$$x_i = (\Phi_2(i), \Phi_3(i), \Phi_5(i), \ldots, \Phi_{p_n}(i))$$

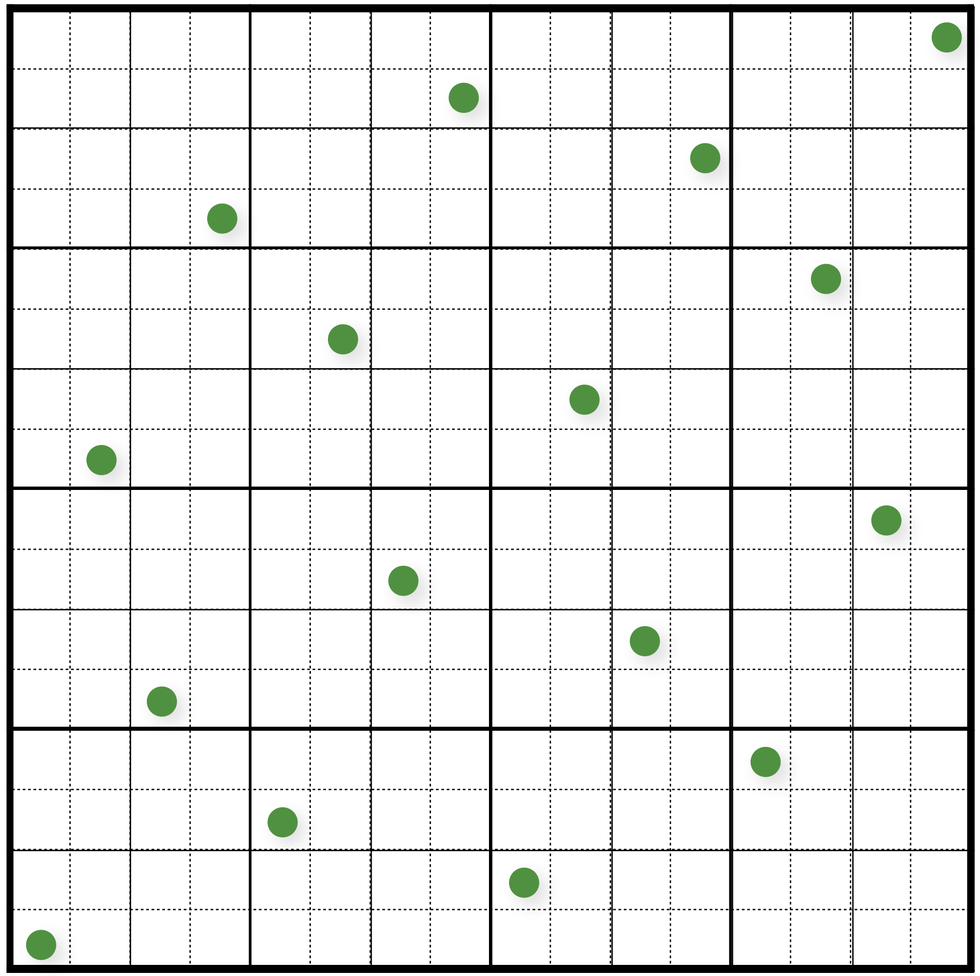
- The bases should all be relatively prime.
- Incremental/progressive generation of samples

Hammersley: Same as Halton, but first dimension is i/N:

$$x_i = \left(\frac{i}{N}, \Phi_2(i), \Phi_3(i), \ldots, \Phi_{p_n}(i) \right)$$

- Not incremental, need to know sample count, N, in advance

The Hammersley Sequence



1 sample in each “elementary interval”
